Controls Specialist | PLC/HMI/SCADA | Electrical Design

PROFESSIONAL SUMMARY

- Controls and automation professional with 10+ years of experience in designing, programming, installing, commissioning, servicing and troubleshooting PLC, HMI and SCADA controlled machines.
- Skilled in programming with Structured Text, Ladder Logic, SCADA, PackML concept and Python (basic); expertise in electrical design and programming on Bosch Rexroth, B&R, CODESYS, Siemens, Allen Bradley, Mitsubishi, Pro-face and GE VersaMax platforms.
- Experienced in servicing fully automatic flexographic printing machines and packaging machines, as well as SPM machines, CNC machines and pick-and-place automation.
- Demonstrated ability to lead an electrical team covering electrical design, schematic preparation, wiring compliance and standards revision, while guiding the assembly team and coordinating with R&D.
- Received the "Excellent Customer Support" award at Bosch Rexroth; delivered responsive remote and on-site support across different time zones and introduced remote connectivity for machines.
- Strong in FAT, SAT, presales technical support, reporting, team management, training and mentoring, and coordination with customers, OEMs and cross-functional teams.

TECHNICAL SKILLS

- **Machines Handled:** Special purpose automation machines using PLCs, flexo printing machines, retrofitting machines, auger filling and packing machines, granite polishing and laser marking machines, material handling pick/place and assembly systems, material feeding mechanisms, conveyors, CNC machines.
- **PLC Programming:** Bosch Rexroth, B&R, CODESYS, Allen Bradley, Mitsubishi, Siemens, Omron, Delta, Festo, Beckhoff.
- **HMI Programming:** Bosch Rexroth, B&R, Pro-face, Allen Bradley, Siemens, Mitsubishi, Delta, Omron, Schneider, Weintek.
- **Drives and Motion:** Servo motors, drives and servo systems; VFD selection, integration, installation and commissioning; Programmable and Motion Logic Controller (PLC and MLC).
- **Communication Protocols:** RS232, RS485 MODBUS-RTU, TCP/IP, SERCOS, PROFINET, PROFIBUS, EtherCAT, EtherNet/IP, OPC (UA, DA).
- **Data and Industry 4.0:** Data logging solutions storing production information in XLS, PDF, RTF and SQL databases for reporting, traceability and analysis; OCI, I4.0, IoT (basic level).
- **Electrical Design:** Control circuit and panel design, selection of control and switchgear components, passive and active elements, I/O and slave-device interfacing, working principles of pneumatic and servo mechanisms.
- **Programming and Tools:** Ladder Logic, Structured Text, SFC, VB Script, PackML concept, function block development, repository and version control (VCS) for software program development.
- **Core Competencies:** Industrial automation, process automation, installation and commissioning, electrical troubleshooting, electrical engineering, project management, FAT, SAT, customer service, presales technical support, team management, training and mentoring.

KEY ACHIEVEMENTS

- Completed a Spices/Flour Filling Application project achieving high accuracy on an auger filling machine, including electrical installation and servo and VFD installation and commissioning.
- Achieved high accuracy welding (in microns) on a battery welding machine for an end user.
- Received the "Excellent Customer Support" award at Bosch Rexroth.
- Conceptualized and introduced remote connectivity to machines for remote support, enhancing customer satisfaction and confidence.

- Received many client appreciations for quick response and service support across different time zones without delay.
- Achieved automatic registration control at high speed on a flexographic printing machine using the B&R system.

WORK EXPERIENCE

External Consultant (Controls Systems - Remote) Jan 2026 - Jul 2026
Nilpeter India Pvt Ltd.

Assistant Manager (Control Systems) Apr 2023 - Oct 2025
Nilpeter India Pvt Ltd, Chennai, India

- Responsible for installation and commissioning of flexographic printing machines.
- Configured and troubleshot hardware and software of machines using B&R, Bosch Rexroth, Siemens, Motion Control and Omron systems.
- Led the electrical team; handled electrical design, schematic preparation, wiring compliance and revision of standards.
- Improved machine programs and updated or changed devices in machines with the latest technologies.
- Created and revised PLC programs as per sequence and customer requirements.
- Provided after-sales machine service support, commissioning and proving out of special jobs at customer sites.
- Coordinated closely with the assembly team, explaining and guiding the assembly; streamlined R&D of current projects for higher speeds, different types of materials and ease of operating machines.
- Designed and programmed add-on machines and flexo printing lines (star wheel conveyor, semi-rotary die-cutting, stackers and sheeting stackers).
- Monitored production of UL and CE standard machines with additional safety programming.

Assistant Manager TEF Jun 2021 - Apr 2023
SEG Automotive, Bangalore, India

- Cross-functional involvement in production operations, including machine application prove-out for alternator/e-motor electrical test benches; responsible for validating electrical parameters, insulation resistance, high-voltage leakage and performance curve testing.
- Ensured functionality through end-of-line testing, calibration and troubleshooting of test stations to meet quality and safety standards.
- Supported commissioning, data acquisition and integration of test systems with production workflows.

Application Executive Aug 2014 - Jun 2021
Bosch Rexroth (India) Pvt Ltd, Bangalore, India

- 6+ years of experience in VFD electrical drives and control technology.
- Successfully commissioned several industrial automation projects including auger filling, granite polishing, fuel rail labelling and laser marking machines.
- Built logic for automation applications in food, pharma, packaging, handling, gantry systems, synchronization applications, automotive and different test rigs.
- Utilized expertise in instrumentation and electrical systems, ensuring precision and functionality across diverse equipment and technologies.
- Coordinated with R&D teams for customized logic and control system innovations.
- Provided central technical support to regional engineers, ensuring compliance with safety standards and technical requirements.
- Integrated and commissioned various control systems (welding, hydraulic).
- Developed knowledge of PLC and SCADA hardware configurations, with network knowledge including routing.
- Key responsibilities included project planning, panel design, logic building, programming, troubleshooting, training OEMs, product promotion and documentation.

Graduate Engineer Trainee (GET) Mar 2012 - Aug 2014
Agraj Automation, Bangalore, India

- Automated plant water flow control for food industries using PLC, HMI, flow meters and flow switches; automated chemical tank temperature and flow level maintenance using PLC, flow meter, temperature controller and sensors.
- Converted relay logic control of machines to PLC control.
- Converted clutch and brake systems in conventional mechanical machines to VFD control.

INDUSTRIAL APPLICATIONS

- Flexo printing machine developed with PackML and Structured Text on a B&R controller.
- Flexo printing machines with safety PLC (UL and CE approved machines) and safety logic.
- EV battery welding machine with Rexroth linear modules, servo systems, Siemens S7-1200 PLC, HMI and Miyachi welding controllers (Profinet, Modbus TCP/IP communication).
- EV battery welding line with Bosch Rexroth control systems and Miyachi welding controllers.
- Developed SCADA/HMI system to automatically create hierarchical year/month/day folders for production data logging, ensuring accurate and organized record-keeping from the PLC system.
- Chip welding machine with Rexroth servo (slave drive system).
- Gallery pump dry leak testing machine (WinStudio, Bosch PLC, HMI, SCADA integration).
- EPS (electronic power steering) connector test: harness, high voltage and vision system automation using Omron PLC, Festo stepper system, GE VersaMax and SCADA.
- Automation of sheet loader machine used to store metal sheets in a production firm with 13 bins.
- Poka-yoke system using relay logic, Omron PLC, LVDT, proximity and safety light curtain sensors.
- Automation for multi drilling and tapping of micro size components: automatic feeding, drilling and ejection of brass components using PLC, multi-head drilling motor and pneumatic cylinders.
- Staggering and height checking unit for stator and rotor using PLC, load cell, linear scale meter, conveyor and sensors.

EDUCATION

Bachelor of Technology in Electrical and Electronics Engineering
Acharya Nagarjuna University • India
